

DIVIDE™

Humerus-C Nailing System

DIVIDE™ Humerus-C Nailing System offers an effective intramedullary nail for humeral fracture management. The proximal locking offers possibility of interfragmentary compression for enhanced stabilization of transverse and short oblique fractures. The system provides an accurate and fast mechanical aiming device for proximal and distal locking.

Features & Benefits

- Minimal invasive technique and biomechanical stability allow early functional exercise.
- **Proximall Locking:** Possibility of interfragmentary compression for enhanced stabilization of transverse and short oblique fractures.
- **Distal Locking:** accurate and dynamic distal locking can be performed via the aiming device.
- Compared to Plates and Screw Osteosynthesis: Less damage to muscle, connective tissue and vasculature, reduced periosteal stripping and concomitant soft tissue damage, designed for load sharing instead of load bearing.
- Cannulated nail design for easy guide insertion.
- All of the implants are available in Titanium Alloy and Stainless Steel.

Indications for Use

DIVIDE™ Humerus-C Nailing System is indicated for proximal humeral and diaphyseal fractures, non-unions, malalignments, pathological humeral fractures, and impending pathological fractures.

Implant Information

End Cap, for DIVIDE™ Humerus-C Nail
