

HIMALAYA™ Expert Tibia Nailing System offers multiple locking options allow use of one nail system for many tibia fracture patterns. Three unique and innovative locking options, in combination with cancellous bone locking screws, increase the stability of the proximal fragment for proximal fractures. Distal oblique locking option to prevent soft tissue damage and increase stability of the distal fragment. Its universal design can be used for right or left tibias.

Features & Benefits

■ Advanced proximal locking options

- Three unique and innovative locking options , in combination with cancellous bone locking screws, increase the stability of the proximal fragment for proximal third fractures.
- Two state of the art medio-lateral (ML) locking options enable primary compression or secondary controlled dynamization.

Proximal Locking

■ Advanced distal locking options

- Distal oblique locking option to prevent soft tissue damage and increase stability of the distal fragment.
- Two ML and one antero-posterior (AP) locking options for stability of the distal fragment.

Distal Locking

■ Locking screw with dual core shaft design for optimized purchase in cancellous bone

Indications for Use

HIMALAYA™ Expert Tibia Nailing System is indicated for fractures in the tibial shaft as well as for metaphyseal and certain intraarticular fractures of the tibial head and the pilon tibiale. Indications include transverse, comminuted, spiral, oblique, and segmental fractures. HIMALAYA™ Expert Tibia Nailing System may also be used for treatment of non unions or malunions as well as prophylactic nailings of impending pathological fractures.
