Introduction

The KEPLER™ Sacroiliac Plate allows for two screws to be placed on either side of the sacroiliac joint, thereby requiring only a single plate for joint fixation. The plate has a contoured undersurface, intended to match the natural arch in patient anatomy over the sacroiliac joint. Two screw slots facilitate fine-tuning of the plate placement before final fitting of the plate.

The KEPLER™ implants combine a low profile and an anatomical fit. The implants are made of pure Titanium and Stainless Steel.

Indications

Sacroiliac joint dislocations.

Implant Information
