

MARVEL

LCP Trochanteric Grip and Periprosthetic Cable-Plates

System Overview

The MARVEL™ LCP Trochanteric Grip Cable-Plate is designed to provide superior fixation for reattachment of the greater trochanter following osteotomy or fracture, and additional distal fixation to help counteract the torsional forces of the abductor muscles. The LCP Curved Broad Cable-Plate 4.5mm is intended for fixation of femur shaft. Holes integrated in the grips allow passage of the 1.7 mm cerclage cables for secure fixation of the plate to bone. The unique figure-of-eight design of the screw fixation holes allows using the locking or compression screws, giving the surgeon greater flexibility in the management of complex fractures.

Implant Features

Large proximal hooks engage lateral cortex of trochanter for rotational stability.

Holes integrated in the grips allow passage of the cable for securing fixation of the plate to bone.

5.0 mm Periprosthetic Locking Screw for unicortical fixation

Stability by fixation with the cable allows fracture reduction and restore of anatomical function as well as provides early, pain-free mobilization.

Provides the flexibility of conventional screw fixation or fixed-angle constructs.

Cable Positioning Pin

Scallop-shapes for reduced and uniform plate stiffness, and better cable grip.

5.0 mm Locking Screws

Smooth edges and distal tapering end for minimized soft tissue irritation.

Indications for Use

LCP Trochanteric Grip Cable-Plate

- Trochanteric osteotomy
- Extended trochanteric osteotomy
- Trochanteric fracture
- Periprosthetic long bone fractures

LCP Curved Broad Cable-Plate 4.5mm

- Periprosthetic long bone fractures
- Comminuted long bone fractures
- Fractures in osteopenic bone

Implant Information

LCP Trochanteric Grip Cable-Plate 4.5 mm, Long
