

NEPTUNE-II 5.5

Sacral-Alar-Iliac (SAI) Fixation System

INTRODUCTION

The NEPTUNE-II™ 5.5 Sacral-Alar-Iliac (SAI) Fixation System is designed specifically for the Sacral-Alar-Iliac technique for sacropelvic fixation. The Sacral-Alar-Iliac Screw with a favored angle multi-axial head, smooth shank and robust drive feature is optimized for Sacral-Alar-Iliac placement.

The in-line construct of the system eliminates the need for offset connectors, providing more ability to manipulate pelvis in correcting deformity. Midline approach reduces the amount of soft tissue dissection to decrease the risk of wound complication, infection and blood loss.

Implant Features

- **Sacral-Alar-Iliac Screw head features:**
 - Favored angle, which ensures alignment with other implants and proper rod seating
 - Compatible with 5.5 rod systems
- Smooth shank portion of the Sacral-Alar-Iliac Screw may prevent screw threads from irritating the sacroiliac joint
- The Sacral-Alar-Iliac Screw offers a low profile with the ability to connect directly to the rod without the use of lateral connectors
- Cannulated Shank

Indications

- Long fusions to the sacrum
- High-grade spondylolisthesis
- Complex lumbosacral deformities
- Flat-back syndrome requiring corrective osteotomy
- Distal lumbar kyphosis requiring correction
- Pelvic obliquity correction
- Additional bone fixation needed in situations of deformity correction

IMPLANT INFORMATION

[Material in Titanium Alloy (Ti-6Al-4V)]
