

NEPTUNE 5.5 MIS Spinal System

The NEPTUNE™ 5.5 MIS Spinal System is Posterior Multi-Level Percutaneous Fixation System. It is designed to allow surgeons to place percutaneous screws and rods over multiple levels without the need for significant exposure.

The NEPTUNE™ 5.5 MIS Spinal System is indicated for temporary or permanent correction or stabilization of the vertebral column from the thoracic to the sacrum and with the aim of helping consolidation or bone fusion. When used for a minimally invasive posterior approach, NEPTUNE™ 5.5 MIS instrumentation is used in conjunction with MIS Extended Tab Screw Components. It is conducive to the minimally invasive placement of pedicle screws and rods utilizing Screw Extender's and surgeon controlled rod deliveries. The implants are manufactured from surgical grade titanium alloy (Ti-6Al-4V).

Implant Features

Open Retractor Blades allow for direct visualization during rod insertion

Buttress Thread Closure Mechanism

Follows path of K-Wire

Aggressive Self-Tapping Screw

Cortical thread for stronger pedicle purchase

Cancellous thread for strong vertebral body purchase

Precise rod contouring allows multiple levels

Indications for Use

The NETUNE™ MIS Spinal System is an instrument set designed for insertion of NEPTUNE™ MIS extended tab pedicle screws and rods through a percutaneous or mini-open muscle sparing approach.

- Degenerative disc disease
- Spondylolisthesis
- Trauma (i.e. fracture or dislocation)
- Tumor
- Stenosis
- Pseudoarthrosis
- Failed previous fusion
- Deformities (i.e. scoliosis, kyphosis and / or lordosis)
