

ROCKY™ Tibia Nailing System is suitable for all fractures extending from 7-8 cm distal to the tibial plateau, to within 5.5 cm of the distal articular surface, provided that the epiphyses are closed. ROCKY™ is a set of intramedullary nails which offers several advantages over existing systems. A major advantage of the system is the ability to insert both proximal and distal locking screws accurately and quickly without the use of X-rays, using an external mechanical targeting device.

Features & Benefits

- Minimal invasive technique and biomechanical stability allow early functional exercise.
- Accurate and fast mechanical aiming device for proximal and distal locking.
- A locking screw of a smooth shank configuration is much stronger for a given diameter than a fully threaded screw.
- All of the implants are available in Titanium Alloy and Stainless Steel.
- The nails and locking screws are color coded for easy identification.

Indications for Use

ROCKY™ Tibia Nailing System is indicated for: open or closed tibia shaft fractures with a very proximal and very distal extent in which locking screw fixation can be obtained, multi-fragment fractures, segmental fractures, proximal or distal non-unions, proximal or distal mal-unions, pseudarthrosis, corrective osteotomies, pathologic and impending pathologic fractures, tumor resections and comminuted fractures with or without bone loss.
