

VOLGA™

Locking Calcaneal Plating System 3.5 mm

INTRODUCTION

Calcaneal fractures are the most common tarsal bone fractures and they can be challenging to treat. The VOLGA™ Locking Calcaneal Plating System is designed to deliver a new level of performance, versatility, and reliability for calcaneal fractures. The system is composed of several locking plates to meet a variety of procedural needs. Designed to minimize soft tissue irritation while still providing a durable construct, the VOLGA™ Locking Calcaneal Plates offer a variety of plate configurations in a low-profile design and can be utilized through a sinus tarsi approach for a minimally invasive treatment of calcaneal fractures.

Implant Features

- **Plates Specifically for a Sinus Tarsi Approach**

Plates offer a variety of plate configurations in a low-profile design and can be utilized through a sinus tarsi approach for minimally invasive treatment.

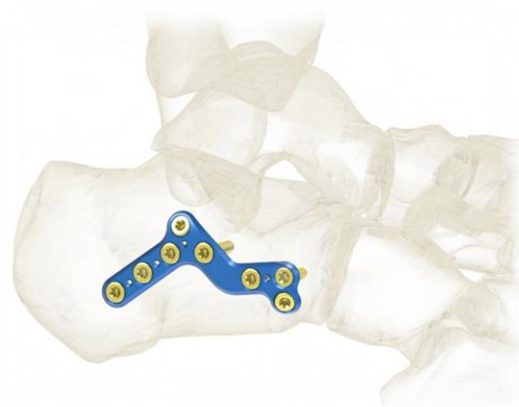

- **Fragment-Specific Options**

Whether comminution is present in the anterior process, through the posterior facet, in the anterior tuberosity, or any combination, multiple plates and sizes are available to treat each of these fracture patterns.

- **Low-profile:**

The plates are designed to minimize soft tissue irritation concerns.

- **Contoured Plates for the Calcaneus**

Indications

The VOLGA™ Locking Calcaneal Plating System is intended for fixation of fractures, fusions, and osteotomies of the calcaneus.
